

L05 - uncertain: owner sorts manually
possible whisker on its own
length ~103 px; from (973, 733) to (888, 675)
side-by-side test: beats searches beside it by +1.81 (plain fur reaches 0.94 one time in 20; a confirmed whisker stretch must beat that)
why it is uncertain: L05: runs along the inside of his fur band, parallel to his outline; owner: "even I can't entirely tell"
my read (not a decision; you sort it): looks to me like the inner edge of his fur band (it runs along the outline). Its test score is high, but the test also rewards a long edge like the band's, so the number can't settle it

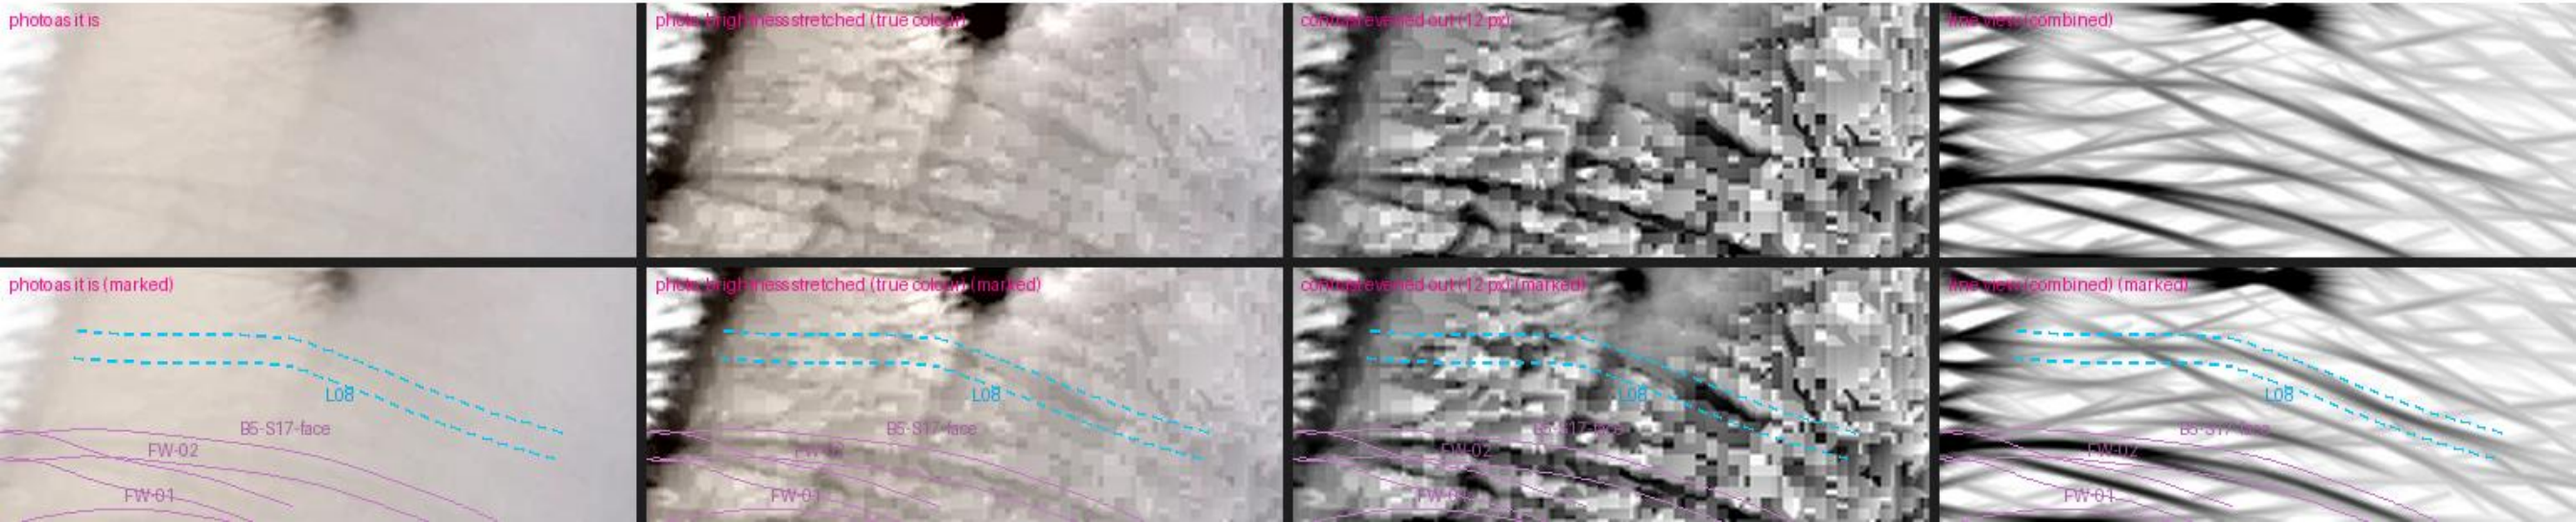

top row: unmarked. bottom row: dashed cyan = this candidate (guides 5 px either side, line left clear);
magenta = known whiskers (bold = its parent). Cyan box on the left: where this is on his face.
scale x2.7

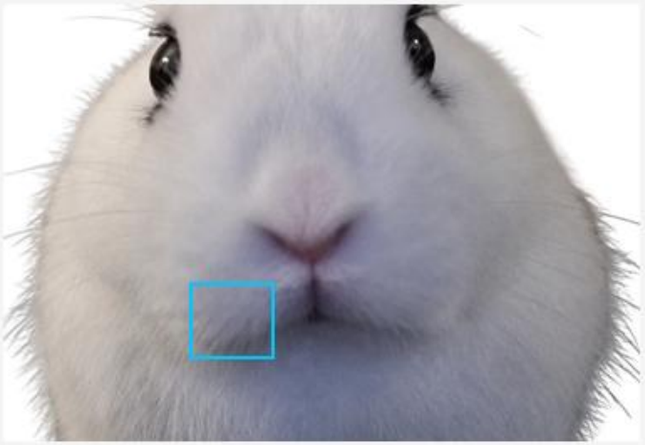

L08 - uncertain: owner sorts manually
possible whisker on its own
length ~183 px; from (220, 567) to (397, 604)
side-by-side test: beats searches beside it by +0.52 (plain fur reaches 0.94 one time in 20; a confirmed whisker stretch must beat that)
why it is uncertain: possible whisker on its own; beats searches beside it by +0.52 (needs 0.94)
my read (not a decision; you sort it): a faint line below his right eye in the stretched photo and the line view; possible

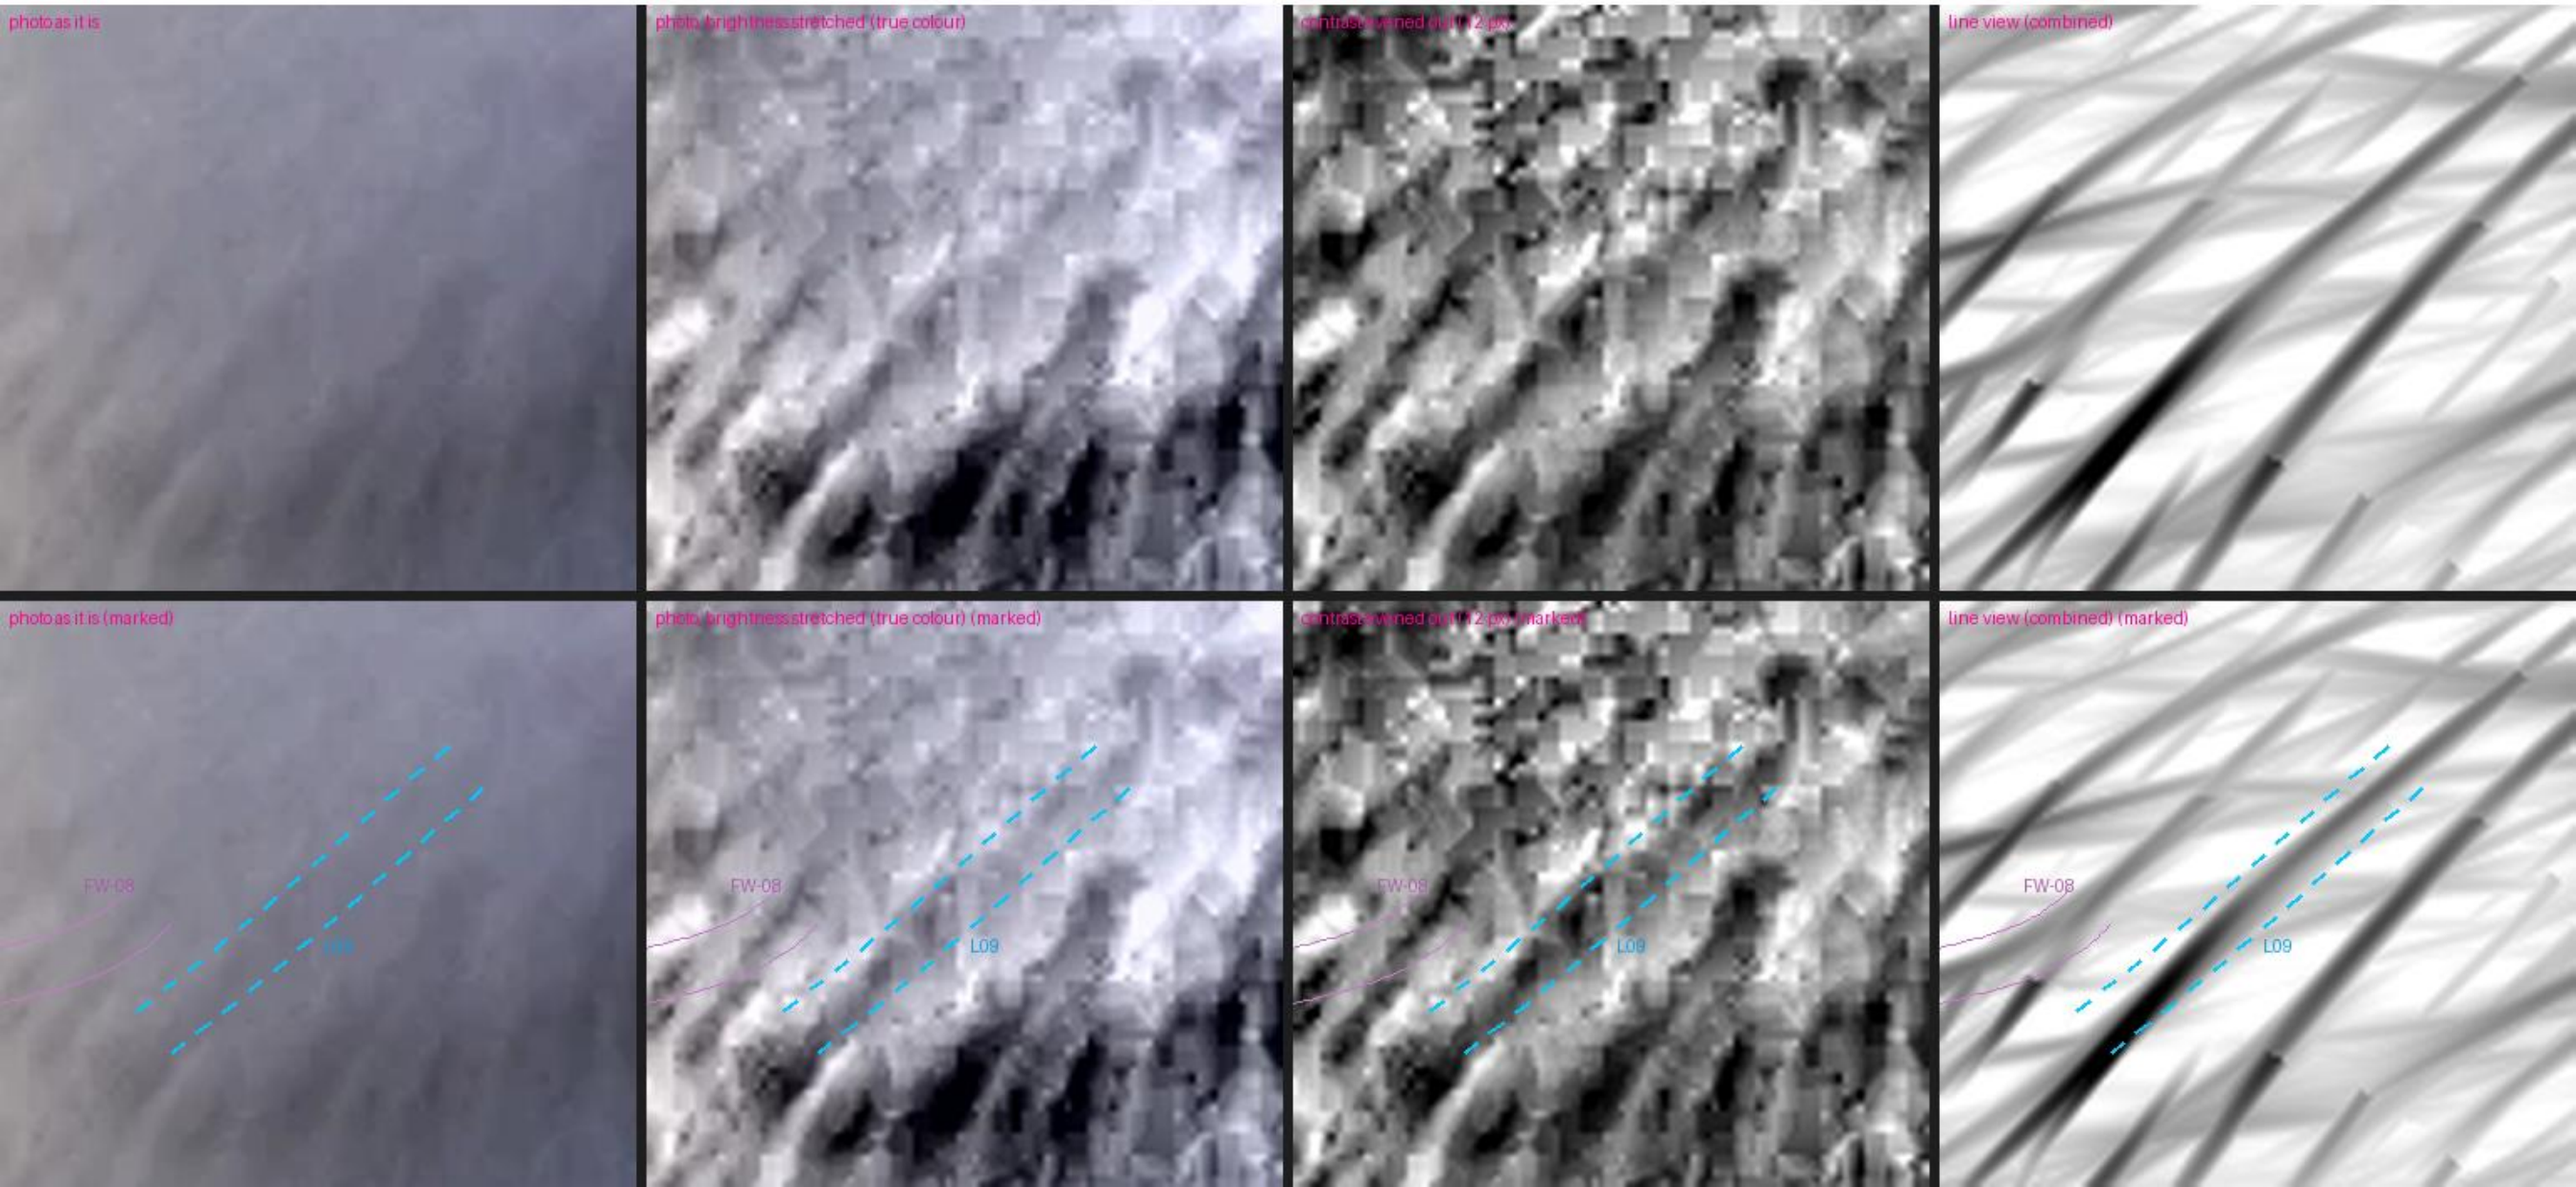

top row: unmarked. bottom row: dashed cyan = this candidate (guides 5 px either side, line left clear);
magenta = known whiskers (bold = its parent). Cyan box on the left: where this is on his face.
scale x1.6

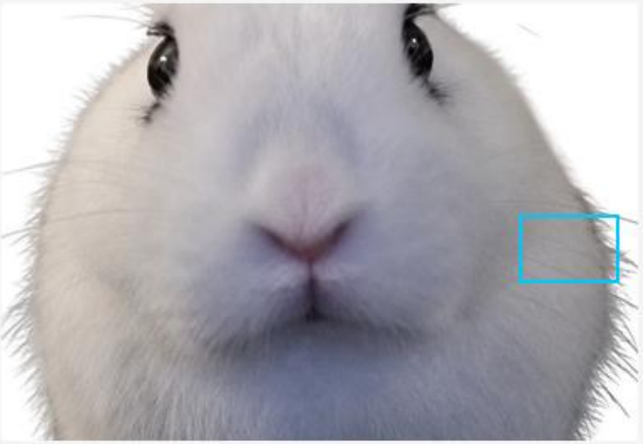

L09 - uncertain: owner sorts manually
possible whisker on its own
length ~79 px; from (404, 853) to (464, 802)
side-by-side test: beats searches beside it by +1.52 (plain fur reaches 0.94 one time in 20; a confirmed whisker stretch must beat that)
why it is uncertain: possible whisker on its own; beats searches beside it by +1.52 (needs 0.94)
my read (not a decision; you sort it): follows one of the dark strokes beside his mouth: the same kind of line as L02/L06, which you said are whiskers

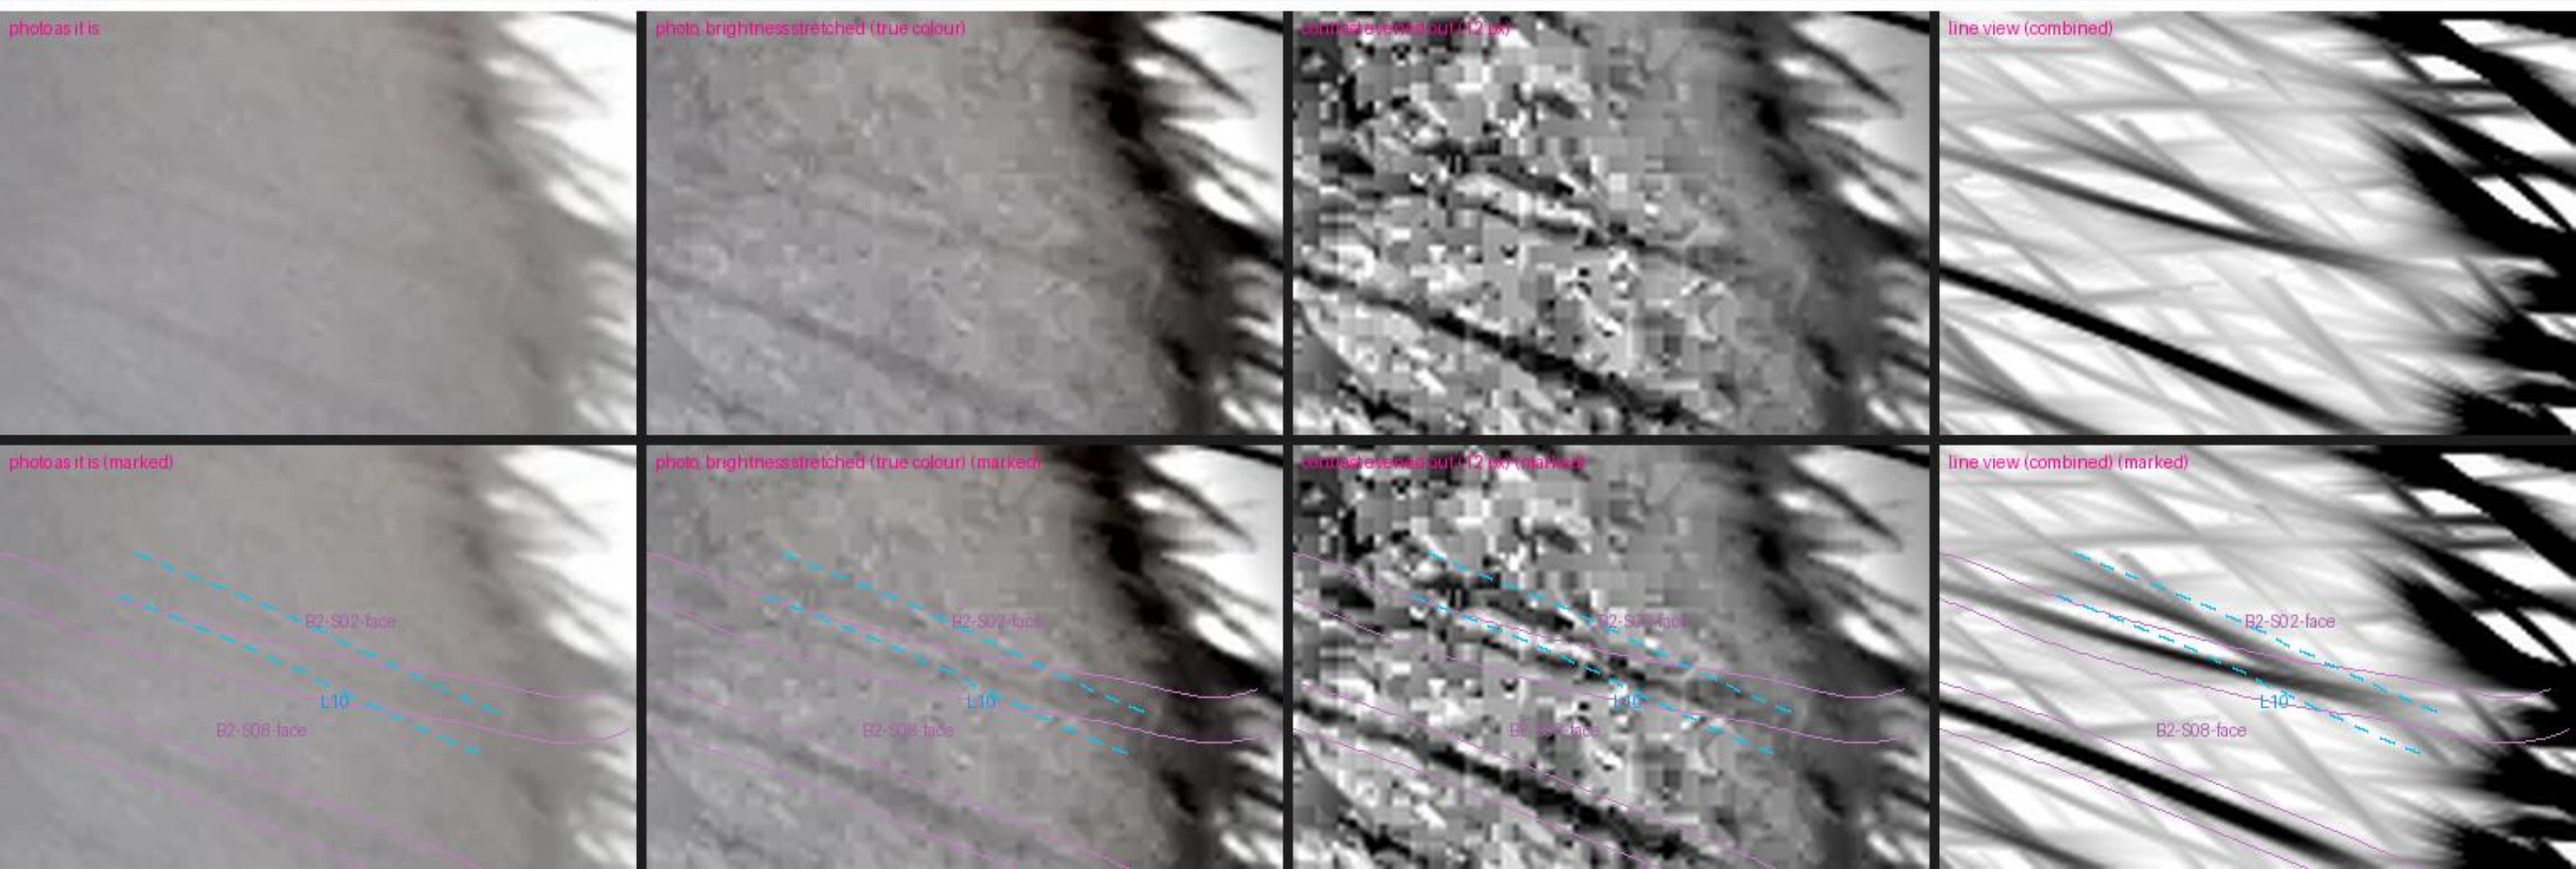

top row: unmarked. bottom row: dashed cyan = this candidate (guides 5 px either side, line left clear);
magenta = known whiskers (bold = its parent). Cyan box on the left: where this is on his face.
scale x3.2

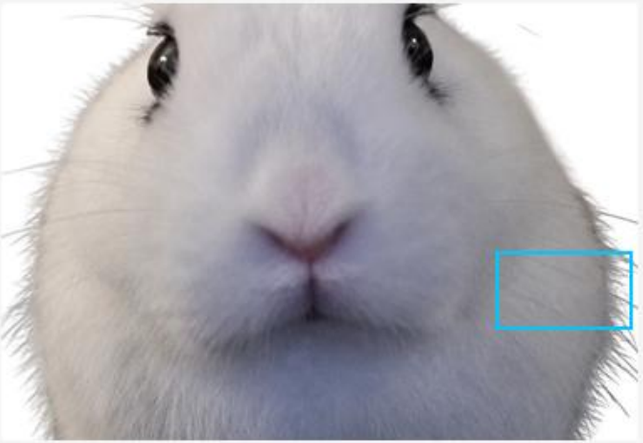

L10 - uncertain: owner sorts manually
possible whisker on its own
length ~92 px; from (870, 708) to (955, 745)
side-by-side test: beats searches beside it by +1.19 (plain fur reaches 0.94 one time in 20; a confirmed whisker stretch must beat that)
why it is uncertain: possible whisker on its own; beats searches beside it by +1.19 (needs 0.94)
my read (not a decision; you sort it): a dark line between B2-S02 and B2-S08 in the stretched photo and evened views; likely a whisker

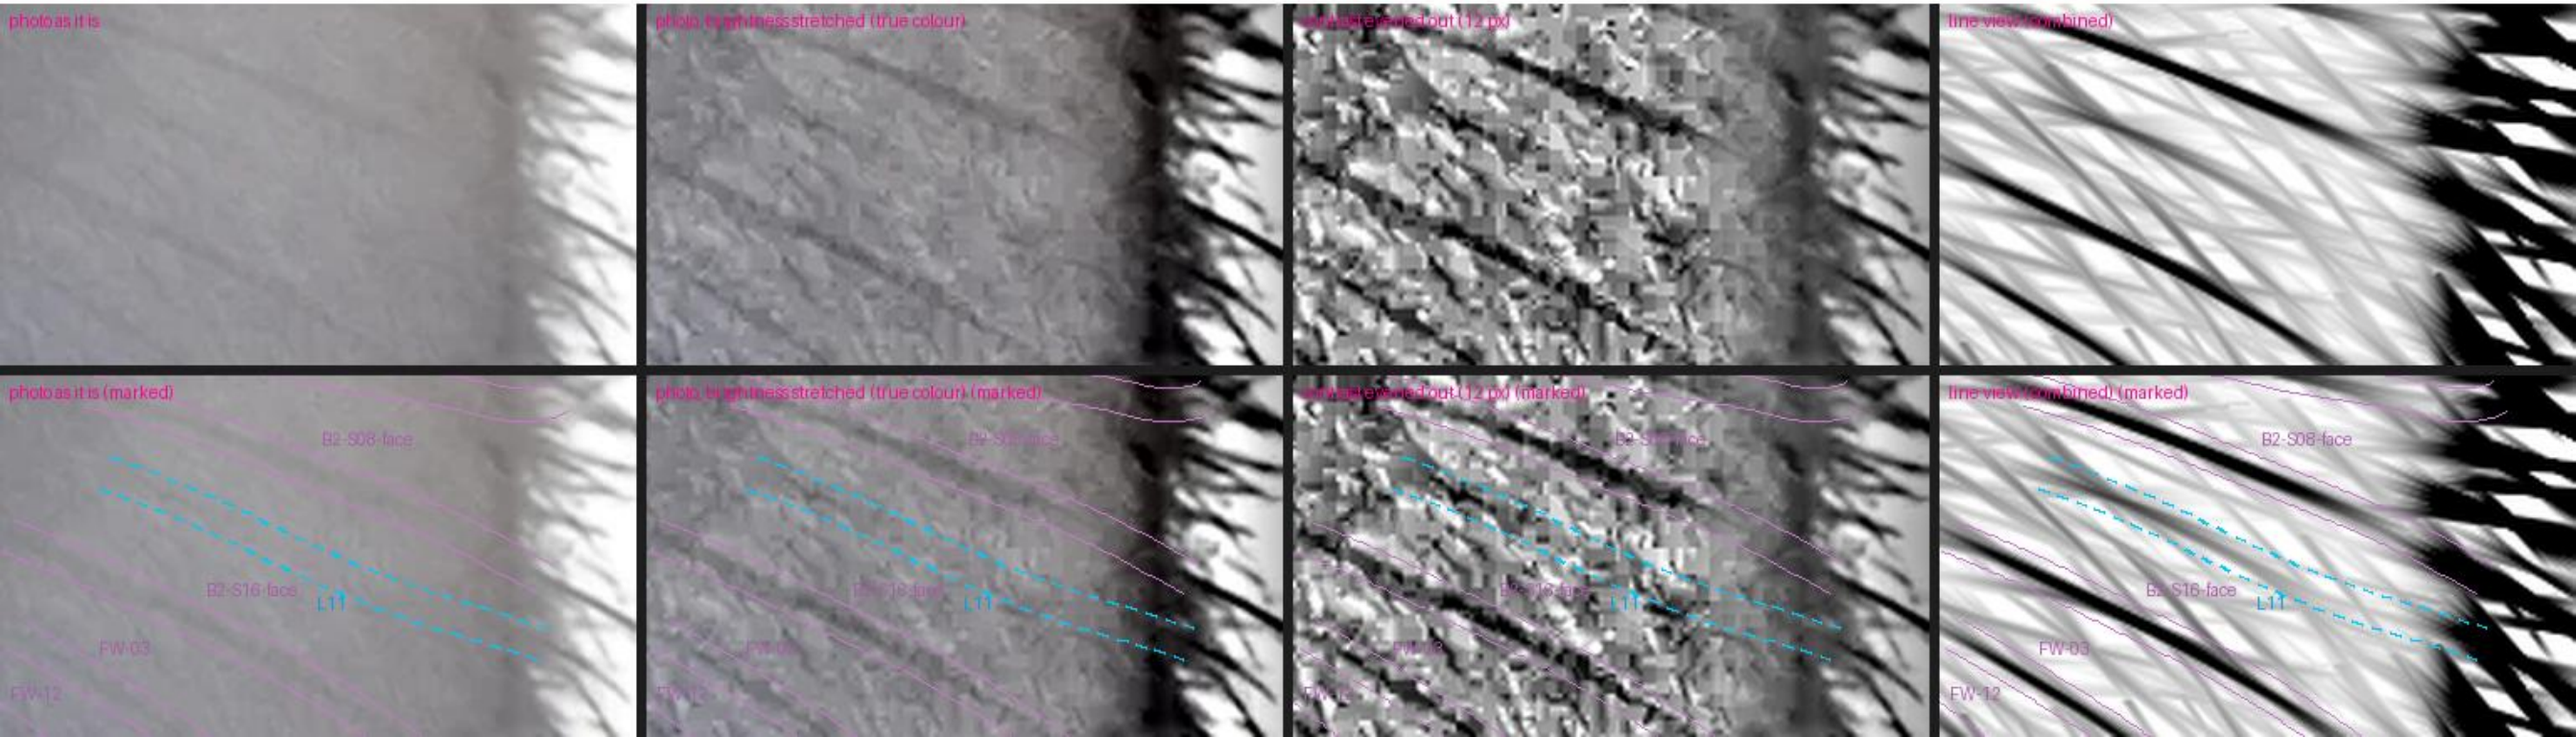

top row: unmarked. bottom row: dashed cyan = this candidate (guides 5 px either side, line left clear);
magenta = known whiskers (bold = its parent). Cyan box on the left: where this is on his face.
scale x2.7

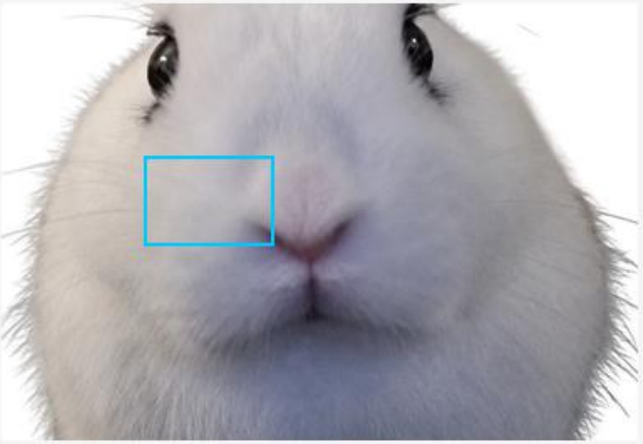

L11 - uncertain: owner sorts manually
possible whisker on its own
length ~144 px; from (974, 813) to (840, 761)
side-by-side test: untestable (every search beside it lies on a neighbouring whisker or the fur band)
why it is uncertain: possible whisker on its own; untestable: every search beside it lies on a neighbouring whisker or the fur band
my read (not a decision; you sort it): a line between B2-S08 and B2-S16 shows in the stretched photo; the test can't judge it (every search beside it lands on those two whiskers)

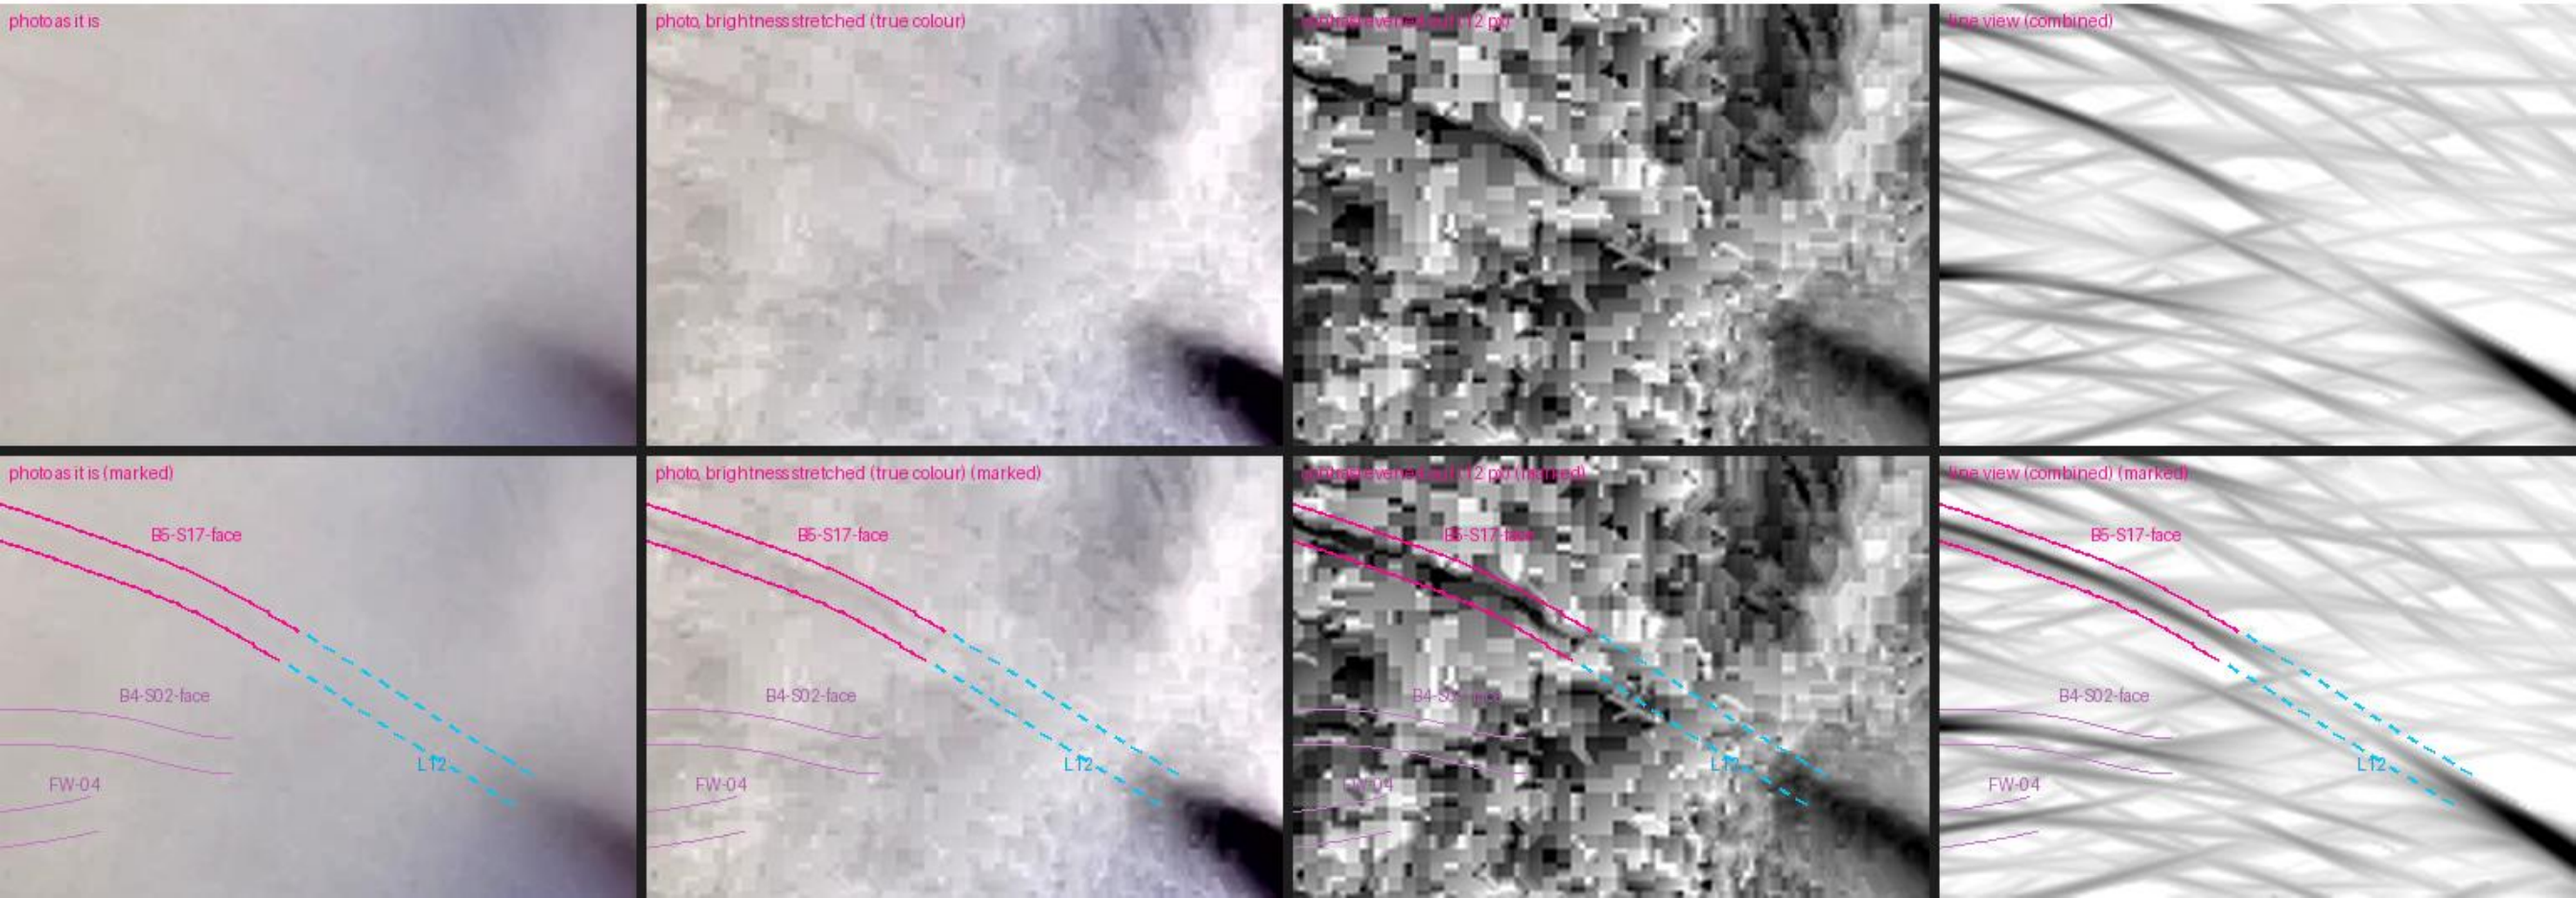

top row: unmarked. bottom row: dashed cyan = this candidate (guides 5 px either side, line left clear);
magenta = known whiskers (bold = its parent). Cyan box on the left: where this is on his face.
scale x2.0

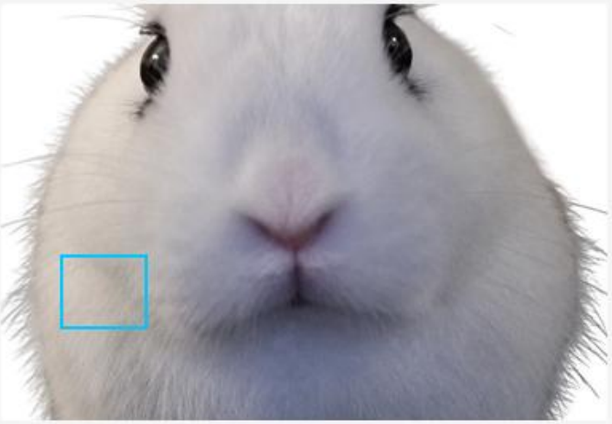

L12 - uncertain: owner sorts manually
possible continuation of B5-S17-face at its nose end
length ~80 px; from (398, 651) to (466, 693)
side-by-side test: beats searches beside it by -0.34 (plain fur reaches 0.94 one time in 20; a confirmed whisker stretch must beat that)
why it is uncertain: possible continuation of B5-S17-face at its nose end; beats searches beside it by -0.34 (needs 0.94)
my read (not a decision; you sort it): B5-S17's curve seems to carry on in the line view, but the test does not support it, and its last part runs into his nose's dark edge

top row: unmarked. bottom row: dashed cyan = this candidate (guides 5 px either side, line left clear);
magenta = known whiskers (bold = its parent). Cyan box on the left: where this is on his face.
scale x2.1

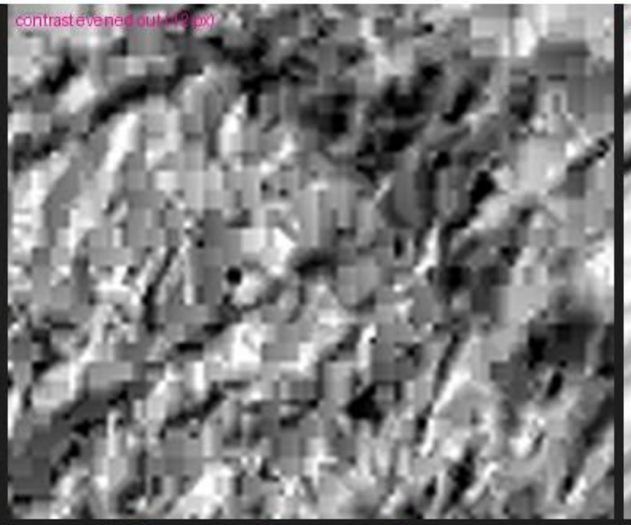

L13 - uncertain: owner sorts manually
possible continuation of FW-07 at its nose end
length ~27 px; from (276, 798) to (298, 782)
side-by-side test: beats searches beside it by -0.12 (plain fur reaches 0.94 one time in 20; a confirmed whisker stretch must beat that)
why it is uncertain: possible continuation of FW-07 at its nose end; beats searches beside it by -0.12 (needs 0.94)
my read (not a decision; you sort it): short (27 px), runs along the edge of a dark patch; I see no line

top row: unmarked. bottom row: dashed cyan = this candidate (guides 5 px either side, line left clear);
magenta = known whiskers (bold = its parent). Cyan box on the left: where this is on his face.
scale x3.0

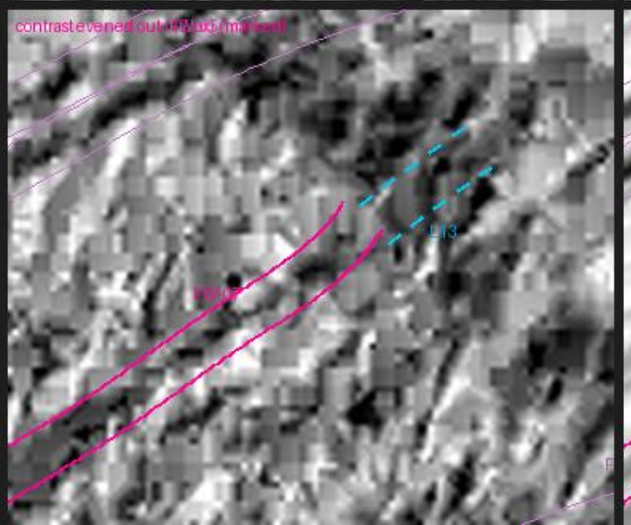

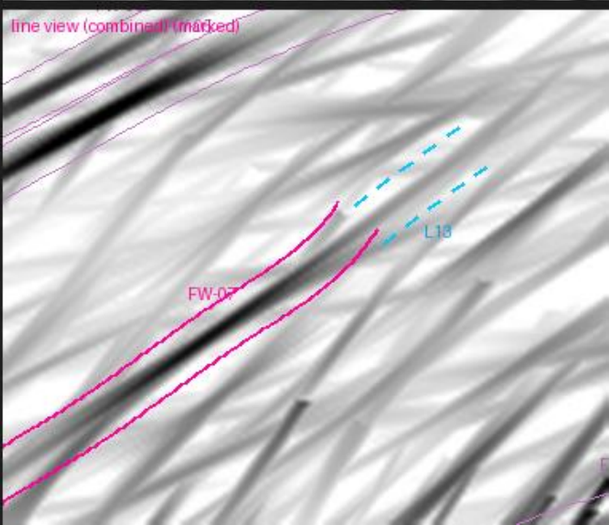

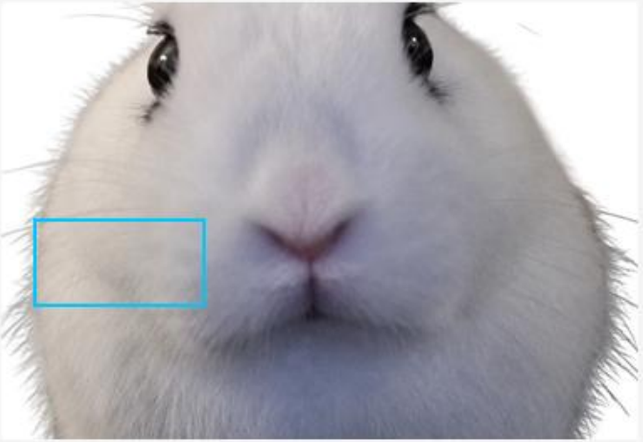

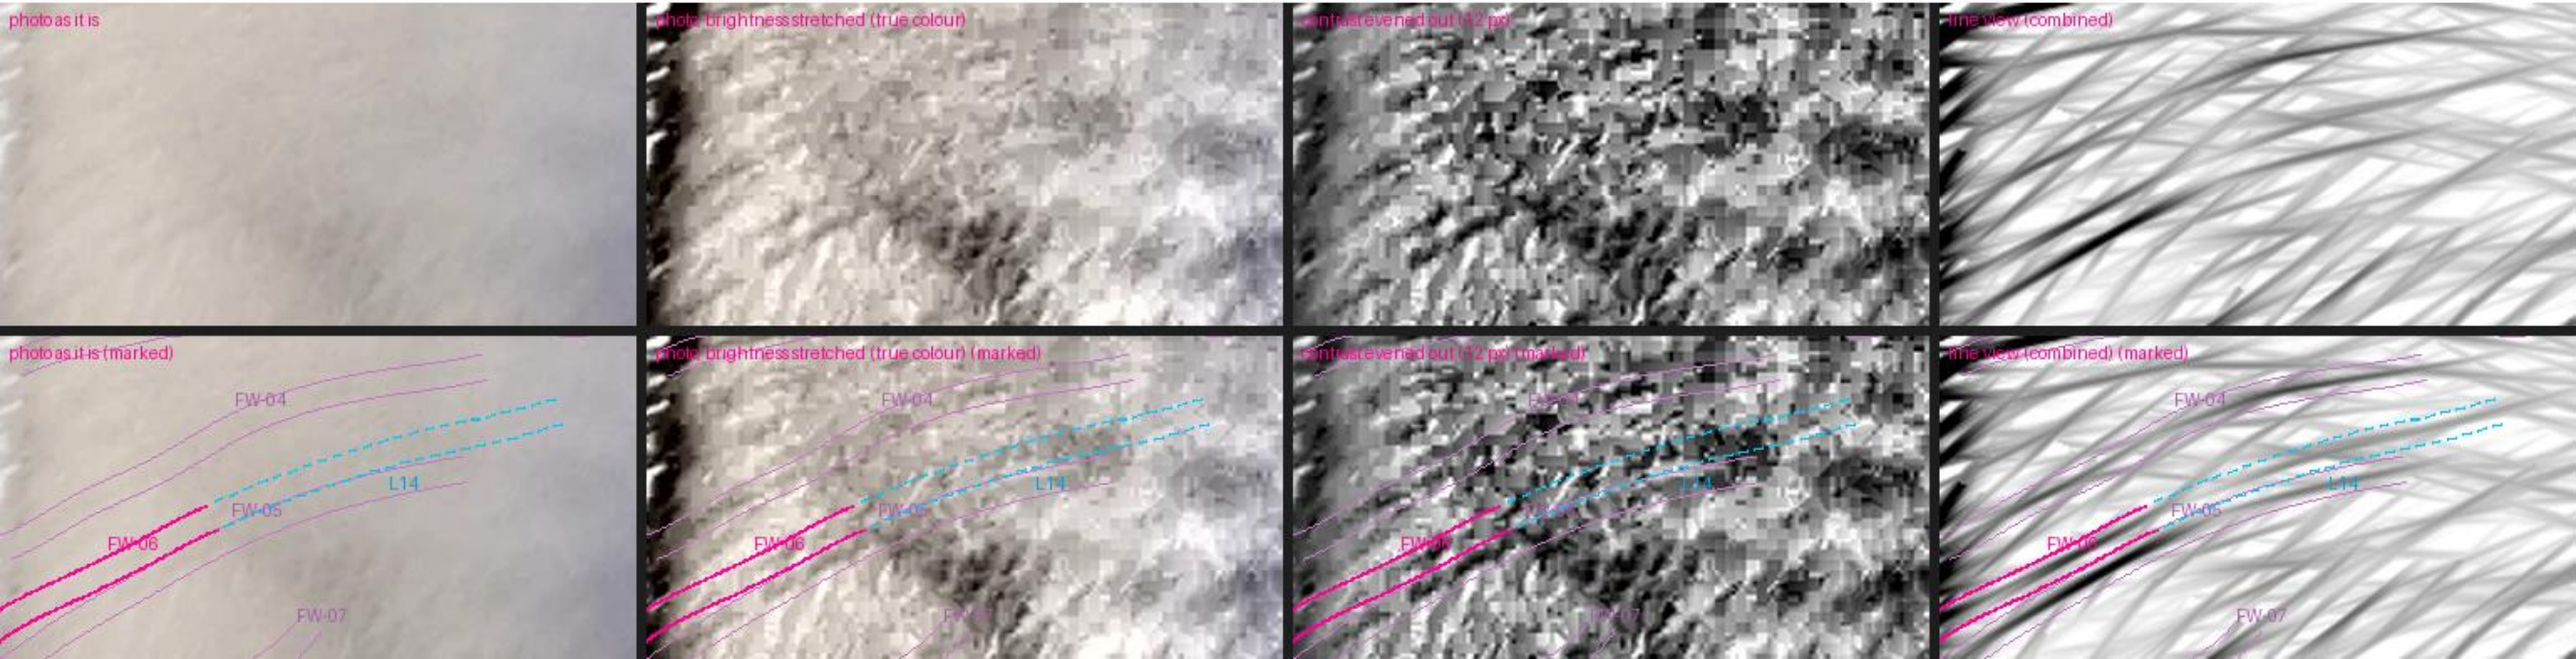

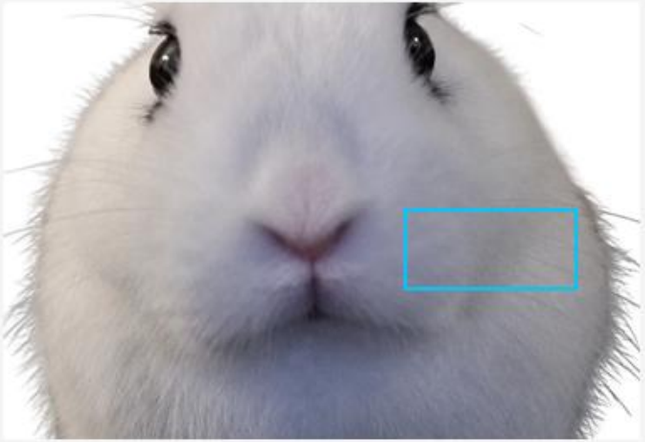

L14 - uncertain: owner sorts manually
possible continuation of FW-06 at its nose end
length ~136 px; from (239, 754) to (369, 714)
side-by-side test: beats searches beside it by +0.19 (plain fur reaches 0.94 one time in 20; a confirmed whisker stretch must beat that)
why it is uncertain: possible continuation of FW-06 at its nose end; beats searches beside it by +0.19 (needs 0.94)
my read (not a decision; you sort it): faint at best beyond FW-06's end; I can't see a clear line

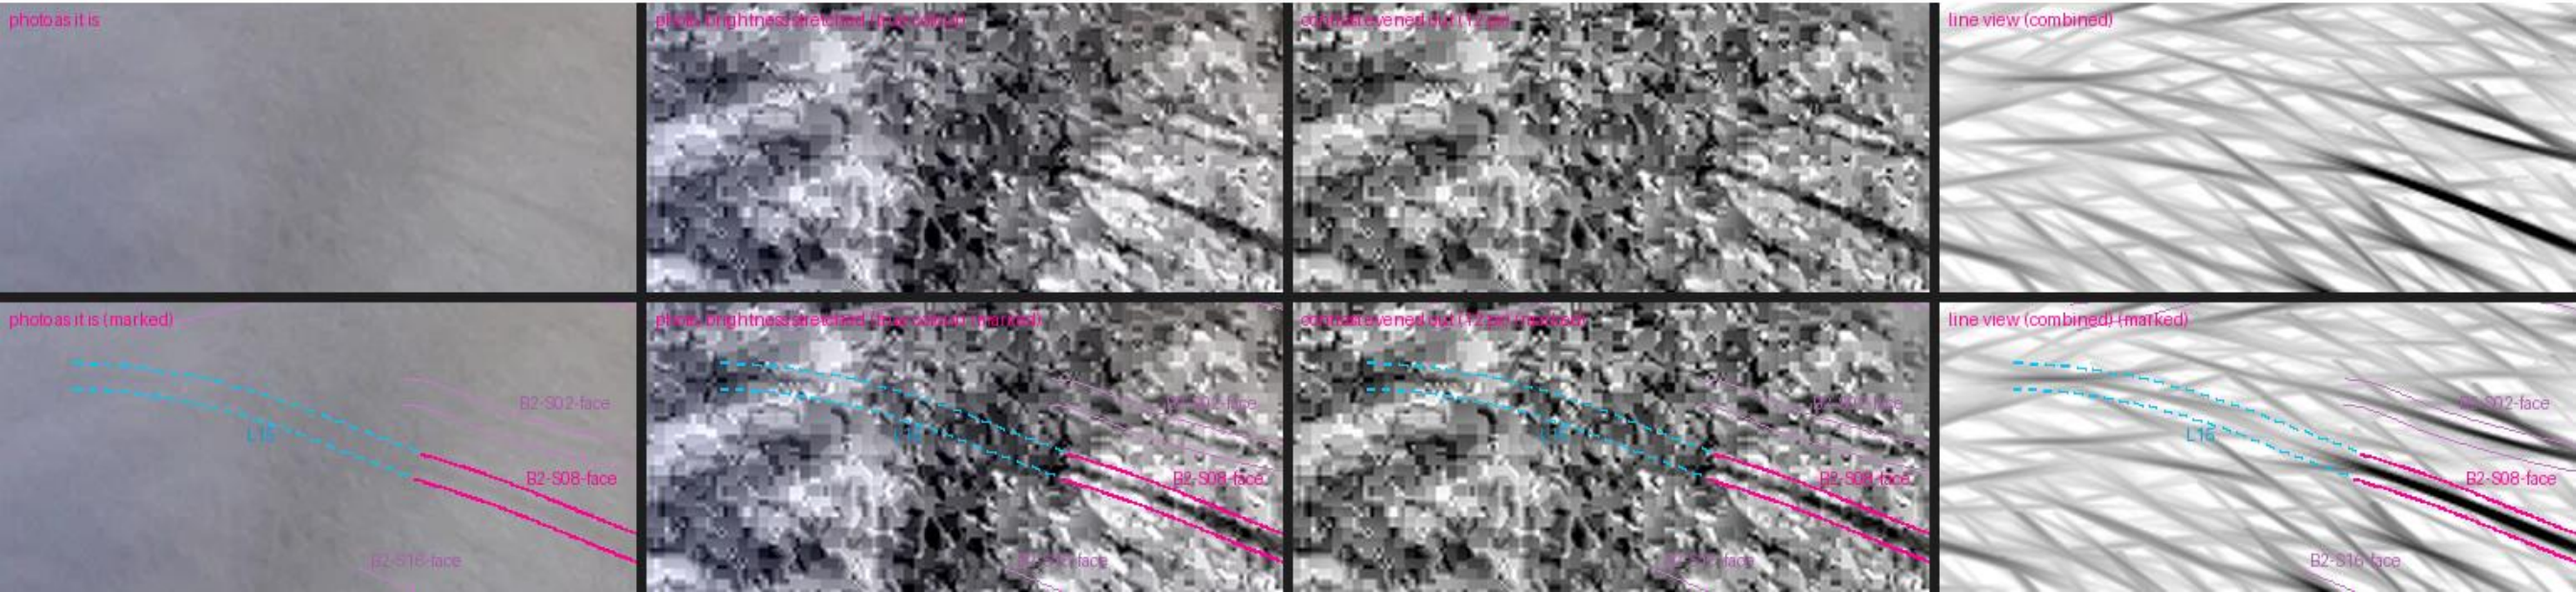

top row: unmarked. bottom row: dashed cyan = this candidate (guides 5 px either side, line left clear);
magenta = known whiskers (bold = its parent). Cyan box on the left: where this is on his face.
scale x1.6

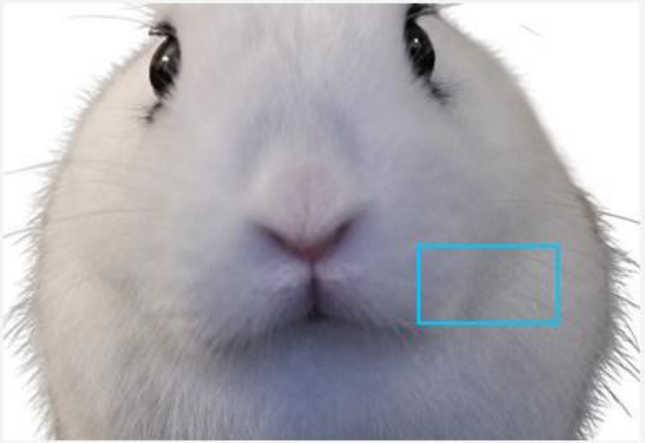

L15 - uncertain: owner sorts manually
possible continuation of B2-S08-face at its nose end
length ~135 px; from (836, 735) to (706, 702)
side-by-side test: beats searches beside it by +0.22 (plain fur reaches 0.94 one time in 20; a confirmed whisker stretch must beat that)
why it is uncertain: possible continuation of B2-S08-face at its nose end; beats searches beside it by +0.22 (needs 0.94)
my read (not a decision; you sort it): faint at best beyond B2-S08's end; I can't see a clear line

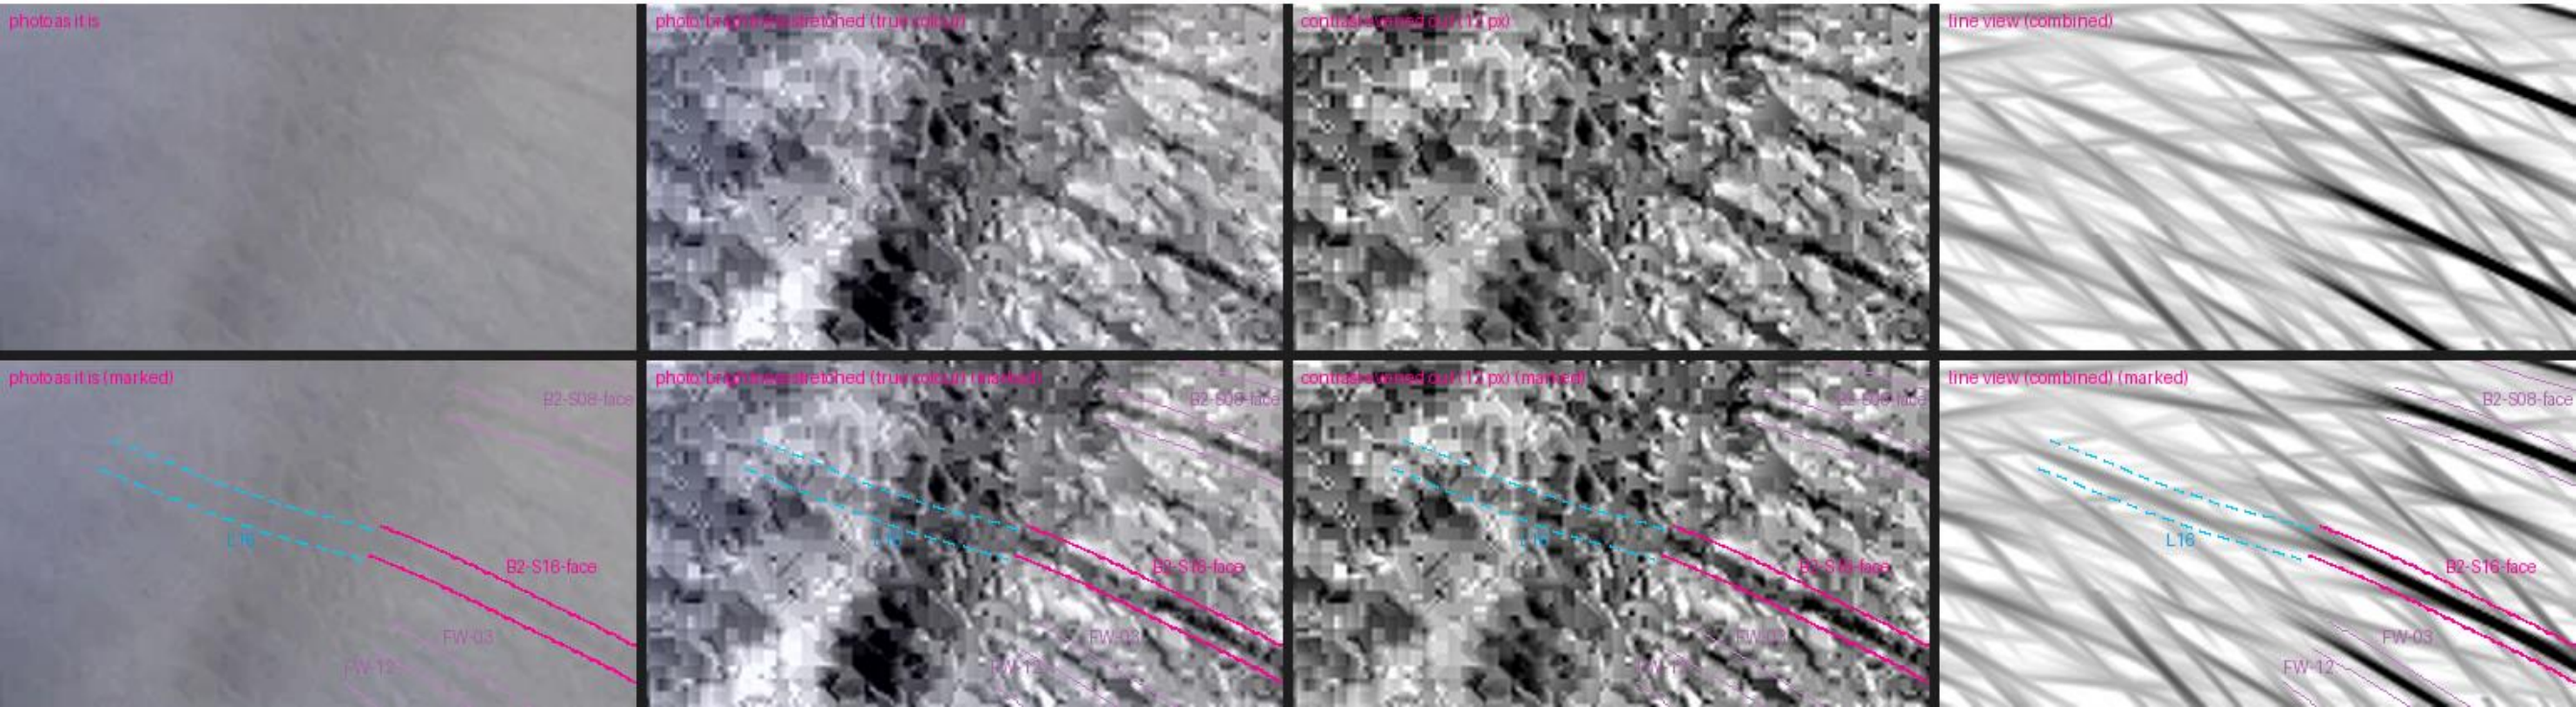

top row: unmarked. bottom row: dashed cyan = this candidate (guides 5 px either side, line left clear);
magenta = known whiskers (bold = its parent). Cyan box on the left: where this is on his face.
scale x1.6

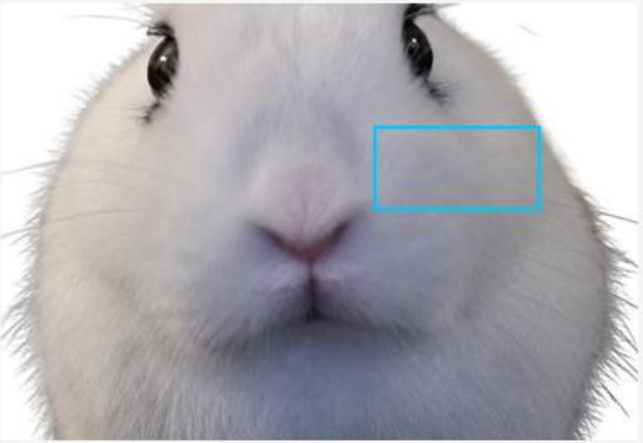

L16 - uncertain: owner sorts manually
possible continuation of B2-S16-face at its nose end
length ~92 px; from (811, 781) to (724, 751)
side-by-side test: beats searches beside it by +0.43 (plain fur reaches 0.94 one time in 20; a confirmed whisker stretch must beat that)
why it is uncertain: possible continuation of B2-S16-face at its nose end; beats searches beside it by +0.43 (needs 0.94)
my read (not a decision; you sort it): I see no line beyond B2-S16's end

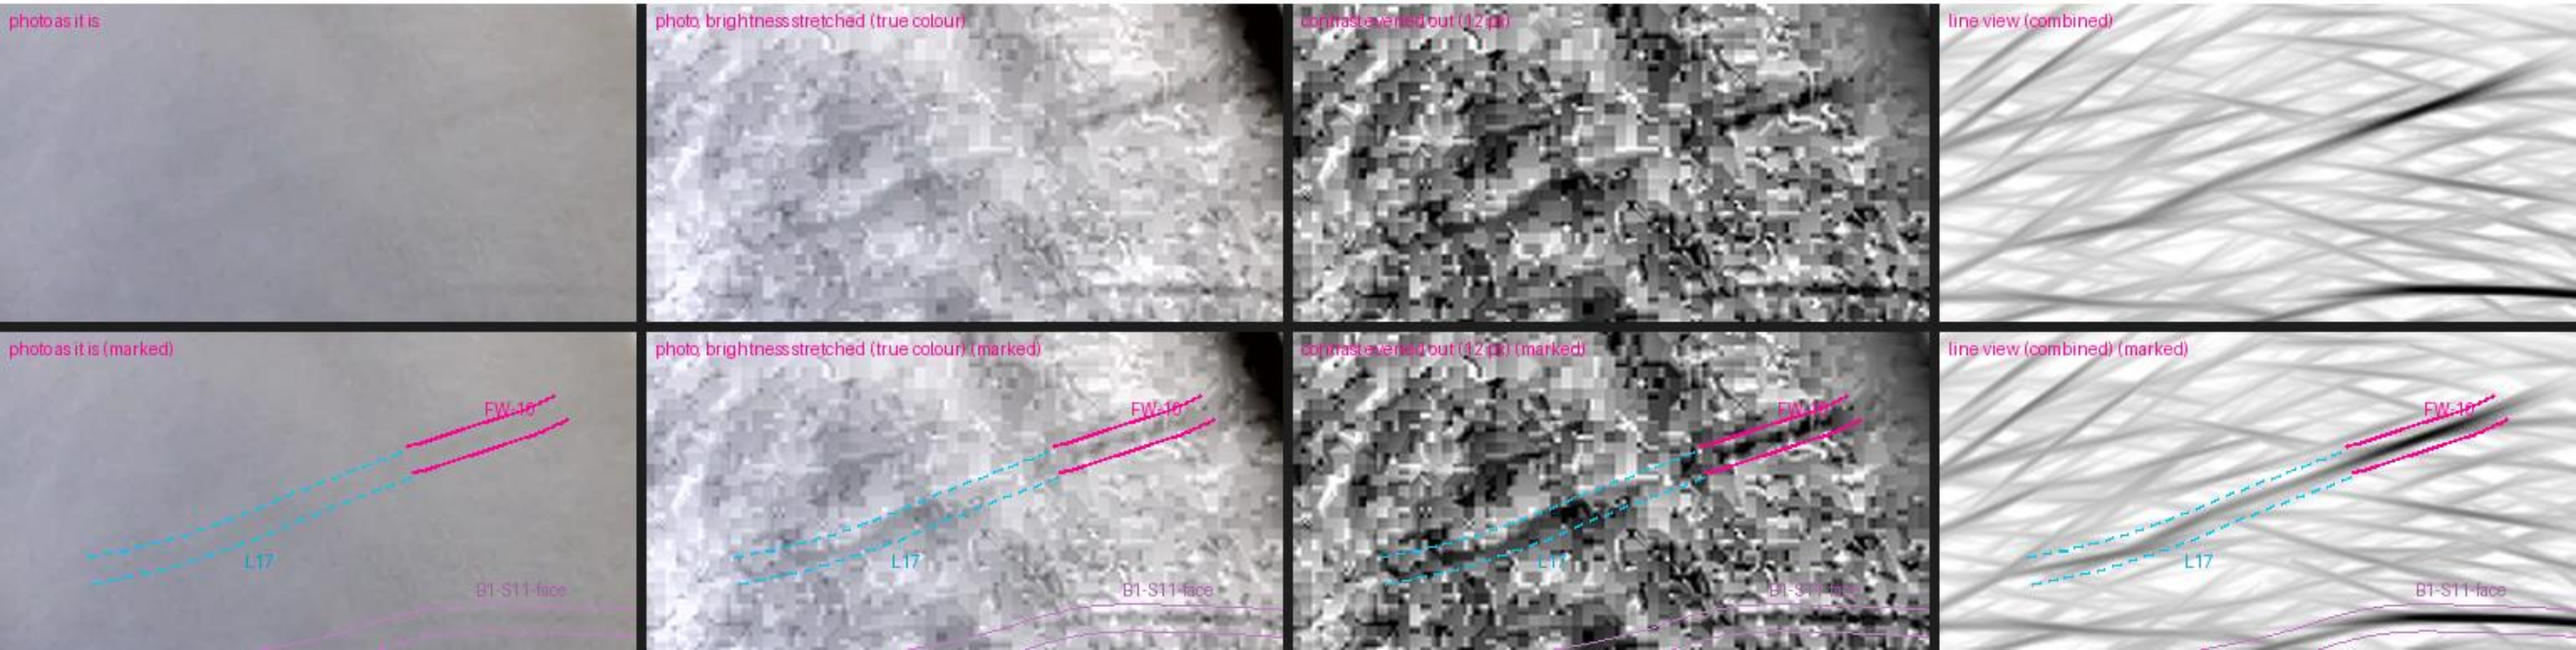

top row: unmarked. bottom row: dashed cyan = this candidate (guides 5 px either side, line left clear);
magenta = known whiskers (bold = its parent). Cyan box on the left: where this is on his face.
scale x1.9

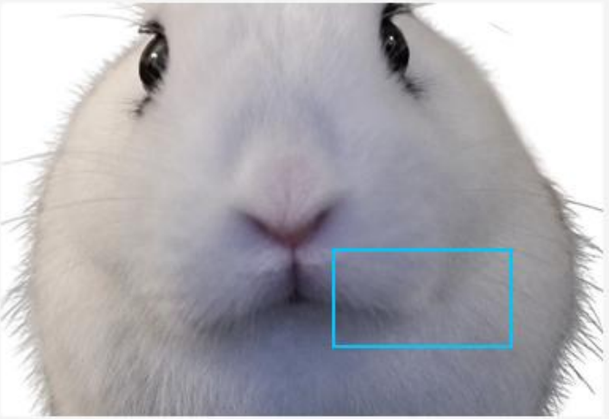

L17 - uncertain: owner sorts manually
possible continuation of FW-10 at its nose end
length ~128 px; from (787, 605) to (666, 644)
side-by-side test: beats searches beside it by +0.89 (plain fur reaches 0.94 one time in 20; a confirmed whisker stretch must beat that)
why it is uncertain: possible continuation of FW-10 at its nose end; beats searches beside it by +0.89 (needs 0.94)
my read (not a decision; you sort it): a darker streak carries on from FW-10 in the stretched and evened views; plausible

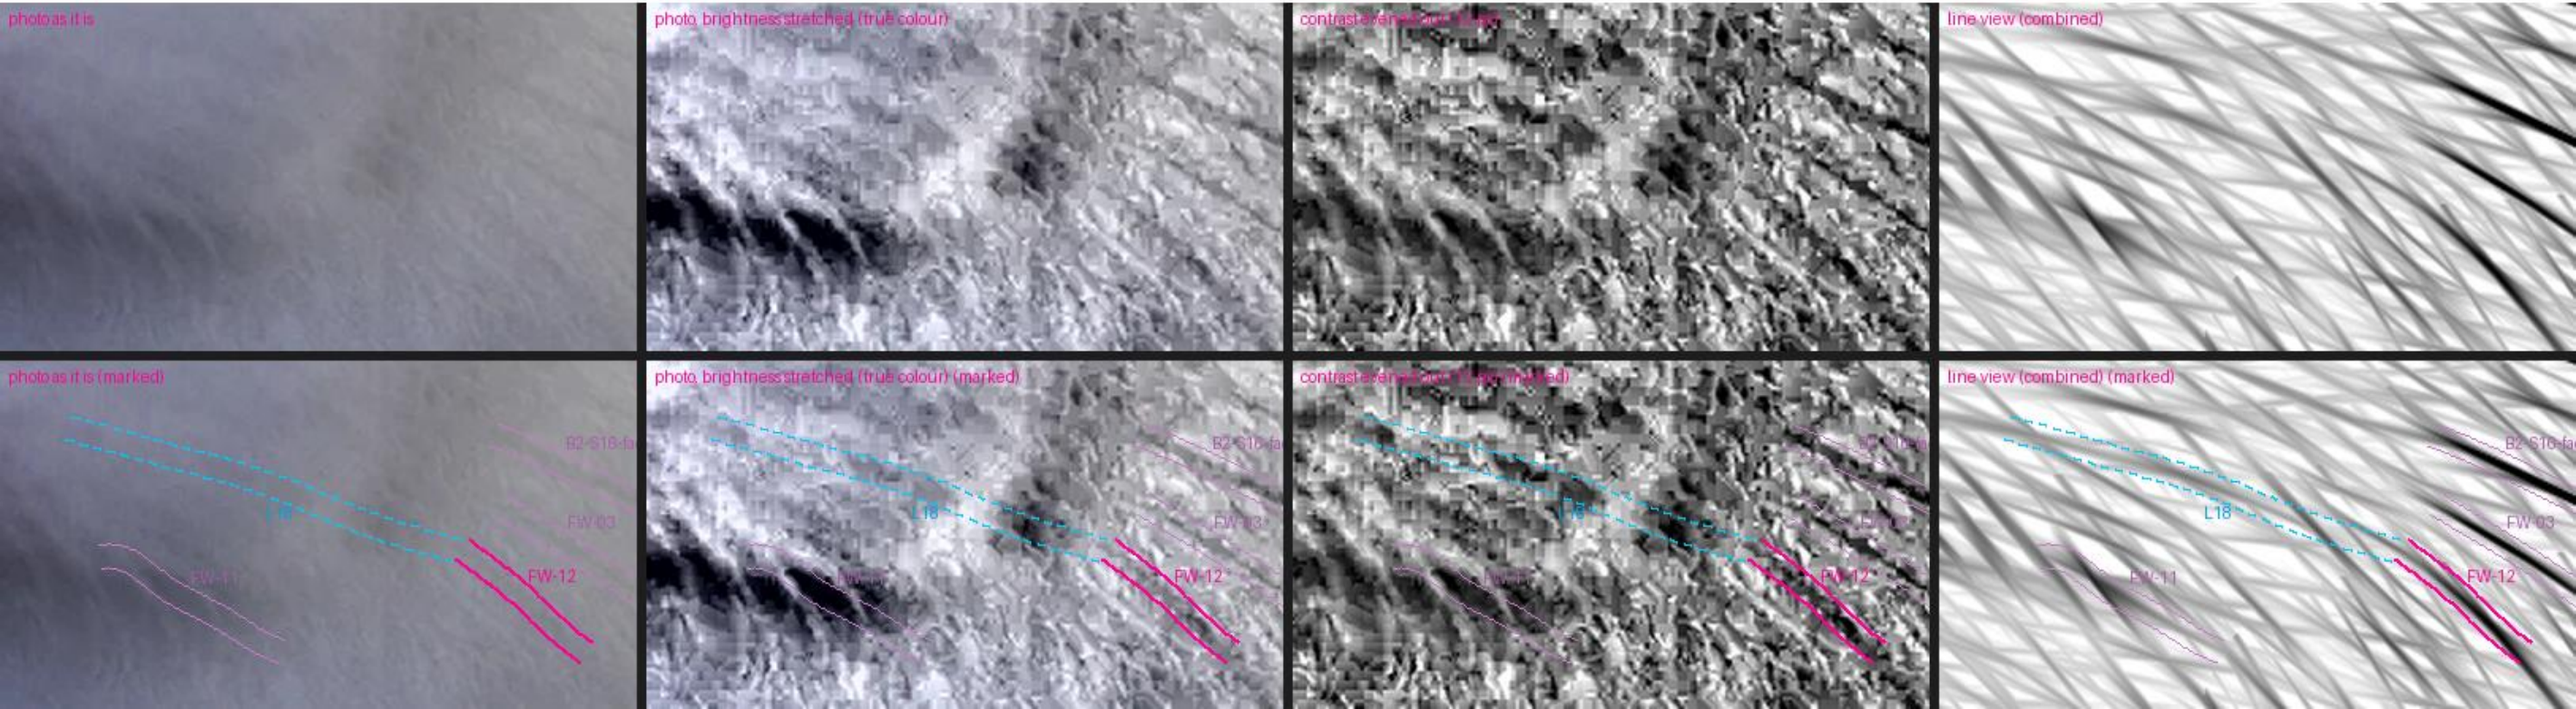

top row: unmarked. bottom row: dashed cyan = this candidate (guides 5 px either side, line left clear);
magenta = known whiskers (bold = its parent). Cyan box on the left: where this is on his face.
scale x1.6

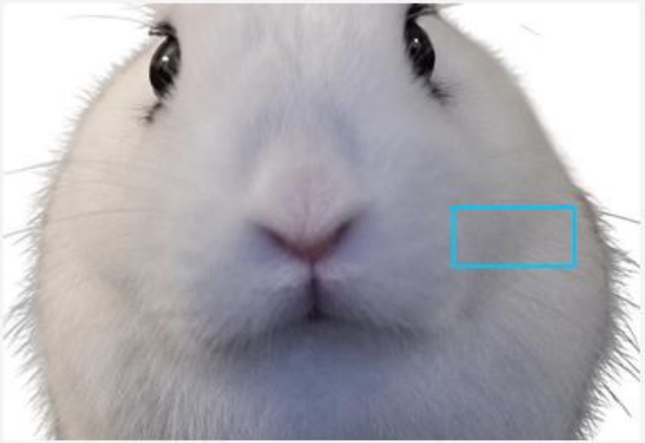

L18 - uncertain: owner sorts manually
possible continuation of FW-12 at its nose end
length ~172 px; from (798, 829) to (634, 778)
side-by-side test: beats searches beside it by -0.07 (plain fur reaches 0.94 one time in 20; a confirmed whisker stretch must beat that)
why it is uncertain: possible continuation of FW-12 at its nose end; beats searches beside it by -0.07 (needs 0.94)
my read (not a decision; you sort it): crosses many fur streaks; I see no single line beyond FW-12

top row: unmarked. bottom row: dashed cyan = this candidate (guides 5 px either side, line left clear);
magenta = known whiskers (bold = its parent). Cyan box on the left: where this is on his face.
scale x1.5

L19 - uncertain: owner sorts manually
possible continuation of B2-S02-face at its nose end
length ~56 px; from (830, 708) to (776, 695)
side-by-side test: beats searches beside it by +0.85 (plain fur reaches 0.94 one time in 20; a confirmed whisker stretch must beat that)
why it is uncertain: possible continuation of B2-S02-face at its nose end; beats searches beside it by +0.85 (needs 0.94)
my read (not a decision; you sort it): I can't see a clear line beyond B2-S02's end

top row: unmarked. bottom row: dashed cyan = this candidate (guides 5 px either side, line left clear);
magenta = known whiskers (bold = its parent). Cyan box on the left: where this is on his face.
scale x2.2
